HOSTED BY CISCO · IN PARTNERSHIP WITH ANTHROPIC

FULL DAY · HANDS-ON

AI ASSURANCE
PARTNER MCP DAY

A full day of hands-on labs with Claude + Cisco MCP servers

Turn plain English into real network action.

Bring your laptop. Leave able to run live, AI-driven network demos in front of your own customers — **no scripting, no API knowledge required.** You'll connect Claude to Cisco's MCP servers and use plain language to interrogate networks, spin up live tests, audit security, and generate a customer-ready report.

WHAT YOU'LL BUILD — FOUR HANDS-ON LABS

ThousandEyes MCP — REQUIRED

Discover a prospect's live services, spin up real tests on the spot, and generate a polished, customer-ready report — the exact demo you'll repeat in the field.

Meraki Magic MCP — REQUIRED

Draw your network from a prompt, run a security audit, and change configuration in plain English — see the full ask-to-action loop on a real Meraki estate.

Splunk MCP — FEATURED

Search, correlate and investigate incidents in plain English — no SPL required. Watch Claude turn a vague question into a concrete root-cause trail.

MCP Tool-Building — FEATURED

Go from user to builder: build your own MCP server with Cursor — little or no coding — then connect it to Claude and drive your own tools in plain English.

YOUR DAY AT A GLANCE

8:30	Doors, breakfast & setup help — browser sign-in, Meraki local setup
9:00	Welcome & keynote — the drive to simplified operations
9:20	AI & MCP fundamentals — what MCP is + agentic AI primer
10:00	Lab — ThousandEyes MCP
11:15	Lab — Meraki Magic MCP
12:15	Networking lunch
13:00	Lab — Splunk MCP
14:05	Lab — Build your own MCP server
14:45	Wrap-up & partner next steps
15:05 +	Optional networking drinks

YOU'LL WALK OUT ABLE TO…

- ✓ **Run a live AI demo** for your own customers — confidently, without a script.
- ✓ **Generate a customer-ready report** from real test data in minutes.
- ✓ **Audit & reconfigure a network** by prompt across ThousandEyes & Meraki.
- ✓ **Investigate in plain English** with Splunk — no query language needed.
- ✓ **Build your own MCP server** with Cursor — and connect it to Claude.

SEATS ARE LIMITED. CLAIM YOURS.

Places are capped to keep every lab truly hands-on. **Talk to your Cisco Account Manager to reserve a seat.**

→ **Reserve with your Cisco Account Manager**

BEFORE YOU ARRIVE

Install the **Claude Desktop app** and sign in. Bring a **laptop with admin rights**. ThousandEyes connects live via secure OAuth — demo licenses provided on-site. For Meraki hands-on, bring a **Meraki API key** (optional).

REQUIRED labs run at every event · Featured labs (Splunk, MCP tool-building) included in the full-day format · Breakfast, networking lunch and breaks built in.
